Data & Analytics Specialist with 4+ years of experience designing and implementing data pipelines, ETL workflows, and analytics solutions using SQL and Python, translating business requirements into reporting and analytical solutions. Strong background in data modelling (Kimball), automation, and query optimisation, delivering reliable, analytics-ready datasets for reporting and decision-making. Experienced in building scalable data platforms across on-prem and cloud environments, including Azure Data Factory, Synapse, and Databricks. Skilled in integrating data engineering and analytics tools such as Power BI, SSIS, Airflow, and modern data platforms to support end-to-end data solutions.

EXPERIENCE

Data and Analytics Specialist

Jul 2022 – Current

FDM Group | Sydney, NSW

- Built and maintained SQL and Python-based data pipelines across AML, M&A, and risk analytics projects, transforming raw datasets into structured, analytics-ready outputs.
- Engineered Python-based scripts and automated workflows, reducing manual data processing effort and ensuring consistent transformation across datasets.
- Established and applied data validation rules within ETL pipelines (SSIS), identifying inconsistencies and improving reliability of datasets used in Power BI reporting.
- Optimised complex SQL queries, reducing execution time by approximately 20–30% and improving efficiency of data processing execution.
- Developed dimensional data models (Kimball methodology), defining grain, keys, and relationships to support consistent KPI reporting.
- Coordinated data workflows and scheduling logic using Airflow and SQL Agent, enabling automated execution of recurring data pipelines.
- Translated business and reporting requirements into structured data solutions and dashboards, ensuring alignment with stakeholder needs.
- Reviewed and validated 100+ SQL queries, data models, and dashboards, improving consistency, accuracy, and maintainability of analytics deliverables.
- Worked across hybrid data environments, integrating on-prem ETL solutions with cloud-based platforms (Azure Data Factory, Synapse).

Projects

AML Transaction Monitoring & Analytics Platform (Azure, SQL, Python, Databricks, Airflow, Power BI)

- Built data ingestion and transformation pipelines using SQL and Python, processing transaction datasets into structured formats for AML reporting.
- Orchestrated workflows using Airflow, enabling automated scheduling, validation checks, and consistent pipeline execution.
- Integrated processed datasets into Power BI dashboards, supporting risk analysis and monitoring of financial activities.

Post-Merger Data Platform & Governance Framework (SQL Server, SSIS, Azure Data Factory, Synapse, MySQL, Power BI, React, Data Modelling – Kimball)

- Designed a unified data model to consolidate post-merger datasets, ensuring consistent KPI definitions and reporting structure.

- Built an on-prem ETL pipeline using SQL Server (SSMS) and SSIS, transforming and loading structured datasets into reporting layers.
- Enabled automated data refresh and reporting through Power BI and Gateway integration.
- Developed a parallel cloud-based pipeline using MySQL and Azure Data Factory for data ingestion and transformation. Leveraged Azure Synapse Analytics for scalable querying and transformation of integrated datasets.
- Supported frontend data consumption through a lightweight React-based interface for reporting use cases.
- Applied data validation, schema alignment, and transformation logic to ensure data quality and consistency.

Risk Assessment & Document Intelligence (Python, OpenAI API, NLP Concepts)

- Developed a prototype solution using Python and OpenAI APIs to analyse financial documents and extract risk-related insights.
- Implemented text processing and prompt-based workflows to identify patterns and support automated document assessment.
- Improved efficiency of document review processes by reducing manual analysis effort.

Customer Sentiment & Churn Analysis (Python, Machine Learning, NLP, Django, Selenium)

- Analysed customer feedback data using Python and NLP techniques to identify sentiment patterns and churn indicators.
- Developed a lightweight Django-based interface/API to present analytical outputs and enable interaction with insights.
- Collaborated on data collection workflows, incorporating Selenium-based scraping outputs to structure input datasets.
- Applied classification techniques to uncover key drivers of churn, supporting data-driven retention strategies.

Technical Trainer
Sep 2019 - Apr 2022

Code Camp | Sydney, NSW

- Delivered 20+ hands-on coding workshops using Python, Scratch, and Blockly, teaching core programming concepts including logic, control flow, and problem-solving.
- Facilitated technical session delivery (environment setup, debugging, live troubleshooting), resolving runtime and configuration issues across multiple classes.
- Provided real-time support during live coding sessions, identifying and resolving technical errors to maintain continuity of learning.
- Adapted technical content based on learner progress, improving engagement and completion rates across cohorts.

Web Analyst
Jan 2020 - Feb 2021

ONE IP International | Sydney, NSW

- Analysed website performance data using Python and Power BI, improving visibility into user engagement and content performance.
- Developed automated data extraction and cleaning scripts, enabling structured and repeatable reporting workflows.
- Built interactive Power BI dashboards to track engagement trends, user behaviour, and content effectiveness.
- Contributed to improvements in website visibility and engagement, with page views increasing from approximately 10–15 to 300–400 during the engagement period.
- Collaborated with stakeholders to define reporting metrics and align data outputs with business requirements.

SKILLS

- Data Engineering: SQL (SSMS), Python (Pandas), ETL pipelines (SSIS), data modelling (Kimball).
- Cloud & Big Data: Azure Data Factory, Synapse, Databricks.
- BI & Analytics: Power BI (DAX), Excel (VBA).
- Databases: SQL Server, MySQL, PostgreSQL.

- Orchestration & Automation: Airflow, SQL Agent.
- Version Control: Git (branching, PRs).
- Data Governance: Data quality checks, validation frameworks, metadata concepts.

EDUCATION

Master of Science - Information Technology (Data Science and Engineering Specialization)

University of New South Wales (UNSW) | Sydney, NSW Jul 2021

- Machine Learning, Data Analytics, and Statistical Modelling, with distinctions in Neural Networks, GIS, and Project Management.
- Completed academic projects in predictive modelling and data analysis, including ensemble learning techniques.
- Developed a computer vision solution using YOLO and CBIR for scene analysis and automated video tagging, transforming unstructured visual data into actionable insights.

Bachelor of Science - Computer Engineering

National University of Sciences and Technology (NUST) | Islamabad, Pakistan Aug 2018

CERTIFICATIONS

Professional Scrum Master I (PSM I) – Scrum.org 2023

KPMG Data Analytics Virtual Internship 2021

Quantium Data Analytics Virtual Internship 2021
